

# VENDLET

V5 and V5+

## QUICK GUIDE

### WHEN VENDLET IS USED AS SIDE RAIL

The  button works as a stop button

1. The surface of the bed must be flat and horizontal.
2. Remove the plastic sides and hang them on the support bar.
3. Double-click the  button to activate the VENDLET system. The VENDLET system produces an acoustic signal and the green diode over the power symbol turns on. When the hand control has been inactive for 90 seconds, the system is off again.
4. The patient is repositioned by operating the hand control.

Tighten the sheet on the red bar

Slacken the sheet on the red bar

Raise the red bar

Lower the red bar

Power w. illuminated diode/ stop

Tighten the sheet on the blue bar

Slacken the sheet on the blue bar

Raise the blue bar

Lower the blue bar

Under bed light (accessory)

5. After repositioning the patient; raise the bars if these have been lowered.
6. Attach the plastic sides – 2 on each side. See also the side rail guide.

During the procedures always stay focused on the patient.

*VENDLET must be used and installed in accordance with the manual*
